Art Unit: 1794

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 39 and 40 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Applicant does not provide support for “contains no added fructose.” It is further noted that it is not clear whether Applicant intends that natural honey contains no added fructose or that the claimed invention contains no added fructose.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 39-52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shimizu et al (JP 01-181751) in view of Staub et al (US 4379782).

Shimizu et al (JP 01-181751) disclose a honey composition and process comprising mixing a refined honey, 10 to 50% pure honey, and 10% to 40% oligosaccharide then sterilizing the honey composition at 120°C to 140°C (see abstract).

Art Unit: 1794

Regarding the pH, natural honey has a pH between 3.4 to 6.1, with an average of 3.9, according to the National Honey Board (<http://www.honey.com/downloads/ph-acidsinhoney.pdf>). The addition of sugars to the honey would not be expected to change the pH, sugars being essentially neutral. Accordingly, a pH of "about 4.0" would be either inherent to the natural honey, or obvious as being within the usual range for natural honey.

It is further noted that as Shimizu et al use refined and pure honey, the claimed fructose content would not differ from that of Shimizu et al.

The claims differ as to the specific extender employed.

Staub et al (US 4304768) disclose the use of fiber and/or sorbitol in low calorie foods (see columns 1 and 2).

It would have been obvious to a person of ordinary skill in the art, at the time the invention was made, to use either polyols, polysaccharides, or dietary fiber as the extender in that of Shimizu et al because the use of both fiber and sorbitol as extenders in the low calorie food art is both known and conventional.

Once the art has recognized the combination of honey and an extender the use and manipulation of varying amounts is conventional and well-within the skill of the art.

Applicant's arguments with respect to claims 39-52 have been considered but are moot in view of the new ground(s) of rejection.

The declaration filed June 16, 2009 is insufficient to overcome the rejection of the claims because it does not compare to the art relied upon.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
